Why Scientific Computing World?

**SCIENTIFIC
COMPUTING
WORLD**

Reaching an engaged audience has never been more important, and cutting through the market noise to build awareness of your brand has never been harder. With new products and opportunities entering this fast-growing market all the time, **making your brand stand out** and influencing change is a real challenge.

Scientific Computing World is a hub of analysis, feature content, lively debate, technical updates and industry news, making it an **essential platform to support your marketing campaigns**. Our profile in the industry – paired with our understanding of your challenges and our expert knowledge – provides a strong foundation for success. Industry

professionals rely on our exclusive content to **share insights, identify solutions** and **pursue partnerships** to drive their business forward.

Do you want to reach **heads of R&D, IT directors, lead researchers, HPC directors** and **faculty heads**? Our experienced team will recommend the best campaign approach that focuses on influencing your target audience at every stage of the marketing funnel.

Understanding the year ahead

The methods by which scientists and engineers access computing infrastructure are changing fast. Lessons learned from the past three years have shown scientific and engineering organisations that they must consider new ways of working and collaborating, both with internal teams and external partners. **The demand for remote access to data-intensive infrastructure, automation and reporting systems and collaboration tools** continues to rise to meet this shift in working practices.

Cloud services will continue to play an increasingly important role in facilitating access to computing infrastructure. These implementation methods support shifts in the way we work and enable access to computing infrastructure. This is relevant not just to high performance computing (HPC) but to the entire scientific computing ecosystem, as scientists and engineers need to conduct larger simulations,

create more design iterations and leverage new and emerging technologies.

This shift in working practices can also be seen in the ways that laboratory-based organisations are choosing to implement software systems. There is an **ongoing rise in software as a service (SaaS), cloud and web-based systems** that support critical access to data and aid dynamic collaboration.

Another hugely important milestone that cannot be overlooked is that **HPC systems have finally reached the exascale era**, with one system demonstrating an exaflop of computing performance. These exascale systems are creating a path for scientific experiments that would have been impossible just a few years ago. While there will only be a very small number of users that will access exascale class HPC systems in the foreseeable future, the exciting research and development will shape the hardware and software

that scientists use for decades. There's much to be discovered from this work.

In addition to this breakthrough moment for HPC, several emerging technologies are impacting scientific computing in exciting ways. **The sharp rise of artificial intelligence (AI) and machine learning (ML)** impacts almost every scientific discipline, but this new computing paradigm is also shaping computing hardware and even supercomputing systems, which are now increasingly packed with GPUs. The latest generation of GPU technology includes tensor cores explicitly designed to accelerate AI applications.

Quantum computing remains in the developmental stage, but there is a growing buzz around technology and its potential impact on scientific discovery. There is an ongoing technological arms race to see which platforms will succeed. From accelerator cards to standalone systems and cloud access to testbed

‘Cloud services will continue to play an increasingly important role in facilitating access to computing infrastructure’

architectures, there is a growing demand for access to quantum computing. Alongside this hardware development, is an ecosystem of software and algorithm design to try and understand where quantum computing applications can be most successful. In the coming years, scientists need to understand how to develop quantum computing algorithms that can outperform classical applications and where to spend resources in developing them.

Edge computing is tied into both laboratory data collection and also engineering practices such as the development of smart cities, wearable healthcare devices and autonomous vehicles. There’s a **growing trend to move computing systems closer to the critical systems to process data** where

it is needed, and to enable capabilities that underpin future technological advances. Edge technology can provide data on environmental pollution and traffic flow; help monitor health and support autonomous vehicles’ decision-making with real-time data.

Automation is also playing a pivotal role in accelerating research.

This impacts several industries, including engineering, where software is being used to automate the design of new components. However, this is also true in the laboratory where robotics is being combined with software that can automate scientific workflows. In all cases, this drive for automation is creating data and allowing researchers to experiment with new workflows and accelerate their existing processes.

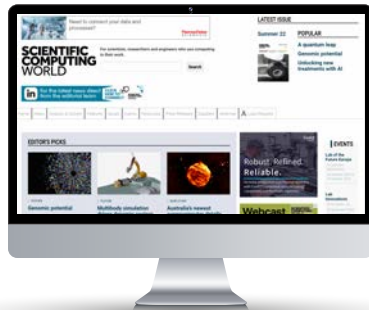

The common theme among these trends is **a demand to support data-intensive research** – and the computing systems that support these research areas. HPC

users, laboratory sciences and engineers have access to unprecedented quantities of data, but deriving value from it is a growing challenge.

Laboratories make use of data management systems and promote FAIR data practices; this not only supports scientific discovery and reproducibility of experiments but also provides the platform – along with other data standards – that enables collaboration with large-scale data sets or federated learning practices. **Open data and data sharing are also incredibly important for research** into rare diseases where they may only be a finite amount of patient data. The COVID-19 pandemic is a timely example of where data sharing and collaboration proved vital. Building the worldwide understanding of the virus, its genetic variants and potential impact on people was driven by a huge global effort from researchers worldwide and underpinned by computing tools and access to data. We played our part.

A global audience

Scientific Computing World delivers quality content to a diverse audience across print, digital and social media. As a central hub of knowledge and information, subscribers rely on our content to make critical decisions about who is important to reach and where investment to support new technology and innovation should be focused.

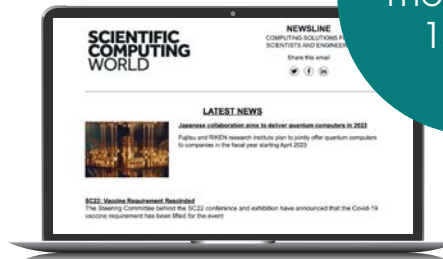

8,500 monthly page views

20% increase in web traffic in 2021

A truly engaged subscriber base boasting an average session duration of **4 mins 10 secs** and average number of sessions per user of **4.83**

Sectors we serve:

- Aerospace
- Automotive
- Quantum Computing
- AI
- Energy
- Medical
- Pharma
- Biotechnology

Monthly reach of more than **15,500**

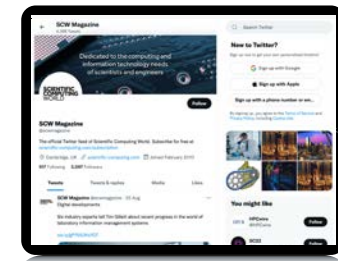

8,000+ email subscribers

21% Average email open-rate

6% click-through rate

Job titles represented include:

- Lead Researcher
- Head of Research & Development
- HPC Director
- Head of Faculty
- IT Manager
- IT Director

Event distribution

Recognised as a trusted publication for scientists and engineers using computing systems, *Scientific Computing World* is distributed at events spanning key industry sectors including Aerospace, Automotive, Quantum Computing, AI, Energy, Medical, Pharma and Biotechnology.

We work closely with leading partners, helping to facilitate an essential platform for innovation and collaboration. By aligning your event marketing activity with our extensive distribution programme, you can take advantage of a unique opportunity to reach this audience.

Some of the global partners and events we work with include:

- Altair HPC Summit
- Analytica
- BioData World Congress
- Bio-IT World Conference and Expo
- Computing Insight UK
- Drug Discovery Chemistry
- EHPCSW 2022 / PRACEdays
- Future Labs Live
- Global Altair Technologies Conference
- ISC High Performance
- Lab Innovations
- ISC High Performance
- Paperless Lab Academy
- Pittcon
- SC22
- SLAS Europe

Product overview

Influence every stage of the marketing funnel through our five defined campaign pillars

In the search for innovative solutions and actionable insights, industry professionals turn to *Scientific Computing World* to help drive brand engagement, reach a wider audience and **grow their business**.

Scientific Computing World presents the ideal platform to **reach new customers** with a breadth of opportunities across multiple platforms to help you achieve your business goals.

Positioned as the leading information source for the industry, we can help you communicate your key marketing messaging to a **qualified audience** of professionals and grow your network.

Work with our experienced account managers to launch a multi-platform campaign, focused on **achieving your marketing goals**.

> Making your content work harder

Harness the power of multi-platform campaigns and reach a wider audience with the content you have worked hard to create.

> Generate quality leads

Widen the net and collect leads from those that influence the buying process and are actively looking for new solutions and insights from trusted brands.

> Boost brand awareness

Place your brand amongst trusted independent content distributed globally to professionals in your sector, both in print and online.

> Present innovative solutions

Promote new solutions or emerging technologies through targeted online advertising and email campaigns reaching key decision makers.

> Lead the discussion

Position your organisation's experts on critical topics through collaboration with our content and showcase your brand as an industry thought-leader.

The magazine

Key benefits

Distributed in print and digital formats, the magazine offers you the opportunity to **present your own message** alongside highly-respected, editorially-relevant content.

Our magazine helps you **build your campaign** by creating visibility among our loyal subscribers and a growing network of industry-event attendees.

Each issue of our magazine is seen by a global audience of more than 9,500 in both print and digital

Analysis & Opinion sponsorship

Shout about
your core
brand
values

Key benefits

Analysis and Opinion (A&O) columns are written by **leading experts** from our industry.

Associating your brand with this type of high-end, opinion-forming content creates a platform for **broadier influence** beyond your specific product campaigns. This represents a perfect showcase for your brand values.

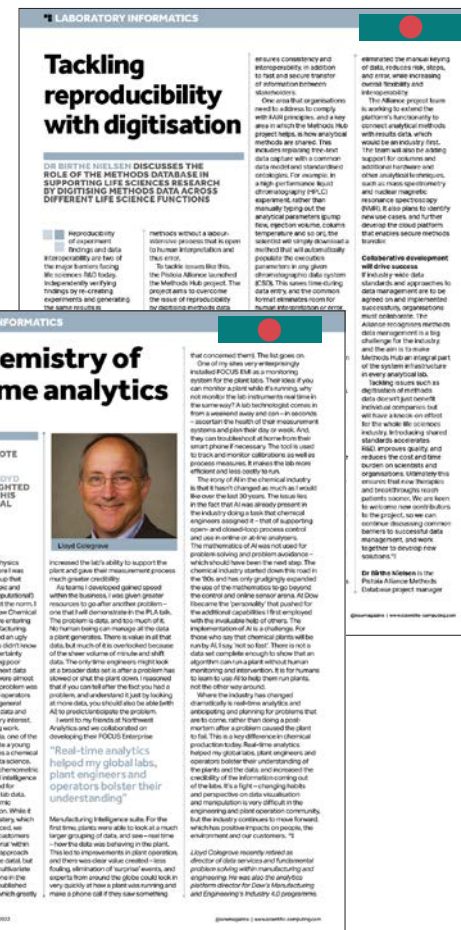

Production details

● Logo

Price

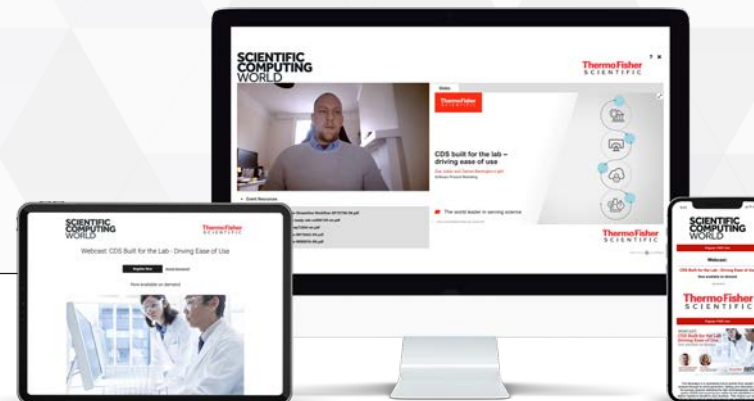

£1,095 per issue

You will receive a logo placement across multiple platforms, as A&O is delivered in-print, hosted online and via a standalone email

> Boost brand awareness

Webcasts

Key benefits

A chance to position your brand as an expert in a key topic through powerful, engaging content that generates **high-quality leads**.

Choose from editorially led webcasts or **drive the debate** with a topic of your own choice that's supported by our in-house creative team.

Price & options

Sole sponsorship

£8,800

- Branding on all marketing promotions
- **Scientific Computing World** as host, moderator and coach
- Pre- and post-event email promotions
- House advert in the magazine
- Social media coverage
- MP4 of the webcast for you to keep
- A supplied list of all of the questions asked during the session
- All leads, including opt-in delegate marketing leads

Editorial webcast sponsorship

£1,645

- Branding on all marketing promotions
- All opt-in delegate marketing leads

> Lead the discussion

> Generate quality leads

> Boost brand awareness

Tech Focus

Key benefits

Tech Focus spotlights a particular area of technology and delivers **a definitive overview**, plus insight into products that are currently available across the market.

You can **place your unique solution** alongside relevant content promoted across our digital products and the magazine.

2023 issue	Topics
Winter	<ul style="list-style-type: none"> Storage
Spring	<ul style="list-style-type: none"> Memory & processors Cooling
Summer	<ul style="list-style-type: none"> Networks and interconnects Cloud services
Autumn	<ul style="list-style-type: none"> Software tools Cluster management

Price & options

Lead sponsorship £3,245

- Exclusive branding on magazine and online Tech Focus
- Sole branding on Tech Focus email, including 468 x 60 banner
- Top-spot 'enhanced product'
- Three x key positions linking to your content in the Tech Focus email

Enhanced product entry £1,100

- 150 words, plus a high-res image, highlighted in the magazine
- Product summary in Tech Focus email
- Full product listing online

White Papers

Key benefits

A White Paper promotion with *Scientific Computing World* allows you to harness the value of your expertise by **presenting the critical principals of your technology** to an engaged, knowledgeable audience.

Promoted across multiple platforms in both print and online; your curated content will be **seen by key decision makers**.

Production details

- PDF-ready version of your White Paper

Price

£1,375

- Hosted online for an entire year
- Promoted via our email and social media campaigns
- Highlighted in a magazine house advert
- Option to gate content and collect quality leads

> Making your content work harder

> Generate quality leads

Feature Case Study

We grant full copyright, so you can share your Feature Case Study as part of your marketing campaigns

Key benefits

A Feature Case Study represents a unique opportunity to **present your proven solution** in the context of an editorially-relevant, independent article.

It is promoted both in the magazine and online. We can offer advice on how to create a **high-quality piece of content** of your solution in action.

Production details

- 750 words
- Featured image

Price

£3,245

Exclusivity, with only one Feature Case Study available per article*

Case study: NTU scientists boosting traffic control AI by 200 per cent

A team of scientists at NTU has adopted Gigabyte's G42 P32 server and the Nvidia A100 GPU Developer Kit to incubate a high precision AI flow model – a smart traffic solution that can be used to test autonomous vehicles and identify accident prone road sections for immediate redesign. The Nvidia A100-based

SPONSORED CONTENT LABORATORY INFORMATICS

Case study: Connecting the scientific ecosystem, by Thermo Fisher Scientific

To standardise processes and ensure FAIR (Findable, Accessible, Interoperable and Reusable) data, a global pharmaceutical company sought to integrate tools, systems and technologies across its organisation. The Chemical and Pharmaceutical Development (CPD) department develops, manufactures and supplies active ingredients from late research through all subsequent phases. It also supplies investigational products for phase I to phase IV clinical trials, managing the characterisation of pharmaceutical formulations.

CPD used six disconnected systems and some 1,000 instruments. There were large differences between sites and departments; heterogeneous IT landscapes and inconsistent LIMS usage meant that a strategy incorporating every system required significant conceptualisation. The goal was not to replace systems, but to drive integration across existing instruments and software. With inadequate IT support, formulation development largely relied on paper documentation. This complicated sharing, comparing and moving data. Analysts would often repeat work unnecessarily. With the same information presented in different ways, inconsistency held the company back – there was no way to effectively use the data to advance its work. Project leaders determined their desired outcomes, covering the needs of the business and its employees. Delivering a system to ease the job of analysts was critical. This would eliminate rework and make routine tasks easier to complete, allowing them more time to focus on science.

'It was critical to deliver a system that would ease the job of analysts'

dissolution, control of reagents and assets including columns; integration of instruments and instrument logbooks; and development of drug product formulations. Legacy data was migrated to the new system, allowing the company to leverage it to advance future formulation development. Bi-directional instrument connectivity is used to drive analytical processes direct from the LIMS, sending worklists to instruments and retrieving data. This eliminates manual data transcription, making information instantly available. By connecting instruments into the new integrated landscape, the business is able to view availability and status, rescheduling time to use them. Scientists are often required to deal with operational tasks, detracting from their real focus. Establishing a strategy to aid people using the systems allows pharmaceutical manufacturers to ensure their data integration programs are more effective. With an almost seamless user experience across laboratories, scientists now have more time for what they are most passionate about: science.

Strategic partnership was the formula for success The success of the project was driven by the shared goals of the pharmaceutical company and the implementation team. Alongside Thermo Fisher's system and integration expertise, the clear direction and vision of laboratory and IT teams made the lab of the future a reality. Today, the organisation has a fully connected workflow between LIMS, ERP, LNA, CDS and more than 1,000 instruments. Efficiency has increased by 20 per cent, with additional improvements to data quality and integrity. Fewer mistakes are possible, though transcription errors, while laboratories benefit from the security of a full audit trail, information isn't simply captured as 'paper on glass', but intelligently linked to improve traceability. The implementation was transformative. At the start of this process, it was clear that the organisation needed a new informatics infrastructure to enable plans for digitalisation and automation. The LIMS facilitates compliance with regulatory processes, enabling significant improvements in product quality. Today, its integrated infrastructure benefits not only the laboratory but all aspects of its operations, providing a seamless flow of information throughout the development, scale-up and manufacturing process.†

Scientific Computing World Winter 2022

gsmagazine | www.scientific-computing.com

> Lead the discussion

> Making your content work harder

www.scientific-computing.com

Viewpoint

Key benefits

Take this opportunity to **share experience and knowledge** to present an opinion on industry-wide matters that others will be interested to hear.

Raise the personal profile of a key voice in your business and show how that expertise within your company places you ahead of your competitors.

Recommendation

If you are supplying a bleed ad, we recommend that any text or important information is placed at least 10mm from the edge of the advert, to allow for any discrepancies when the magazine is trimmed by the printer.

..... **Trim**

These dimensions are where the page will be cut if you would like your advert to run right to the edge of the page, and represents the final dimensions of the printed magazine.

— **Bleed**

In printing, bleed is printing that goes beyond the edge of where the sheet will be trimmed. In other words, the bleed is the area to be trimmed off.

■ **Non bleed ad**

This is the size to create your ad if you wish the advert to have white space all around it on the page, and not run to the edge of the page.

Digital file requirements

PDF-X1a, PDF, EPS, TIFF files are all accepted. All high-resolution images and fonts must be embedded in files. Images must be 300dpi/cmyk.
